## Study Day Objectives

Scientific research is planned research conducted by a researcher for the purpose of contributing to a given science. This is achieved by collecting, analysing, and interpreting data.

The objectives set for the Study Day on Scientific Research in Linguistics: Principles and Recommendations are purely pedagogical-methodological in character. They include among others the following:

- Introducing MA students to scientific research in Linguistics
- Inspiring, motivating, and engaging MA students in academic research
- Raising students' awareness of the standard norms characteristic of scientific research
- Familiarising students with appropriate research tools and strategies in Linguistics research

The Study Day represents an educational context where teachers and students meet to discuss issues relating to such matters as how to choose an adequate topic, how to write the introduction of a dissertation, how to choose an appropriate research design, how to deal with experimental research, among others.
