Preamble

In the face of accelerating biodiversity loss, climate change, and the growing emergence of diseases associated with environmental disturbances, conservation biology plays a central role in contemporary scientific research.

Integrating parasitology and vector ecology now provides a better understanding of the complex interactions between organisms, pathogens, and the environment, within a holistic approach to ecosystem health.

This scientific event aims to bring together researchers, academics, PhD students, and professionals to foster interdisciplinary exchanges and promote innovative approaches to biodiversity conservation.

Objectives

- Present recent advances in conservation biology.
- Explore the role of parasites and vectors in ecosystem dynamics.
- Encourage interdisciplinary collaborations.
- Discuss sustainable management and conservation strategies.
- Promote the integrated One Health approach.

Topics

Biodiversity and ecosystem functioning

Conservation genetics

Host–parasite interactions and vector ecology

Integrated and socio-ecological approaches (One Health)

Microbiology and sustainable development

Instructions for Authors

- **Abstract :**

The submitted abstract must not exceed **350 words** and must be written in **Times New Roman** font, using the following formatting guidelines:

Font size 12 for the main text.
Font size 14, bold for the title.
Font size 10 for the authors' names.
Font size 10, underlined for the presenting author.
Font size 10, italic for the authors' affiliations.

- **Languages : French and English.**

Participation Fees

PhD Students: 1,000 DZD
Teacher-Researchers: 2,000 DZD
Others: 5,000 DZD
